To Whom It May Concern:

I and my colleagues in the Department of Chemistry and Biochemistry at Queens College have been working with Mr. Paul Welch and his firm since late last summer on an exciting and innovative project involving redesign and refurbishment of chemistry teaching laboratories in Remsen Hall at Queens College-CUNY. We had been acquainted with Paul and his past successful projects in Remsen Hall and, since working with him and his design and consulting team are most impressed with the thoroughness, high degree of expertise and creativity which they have brought to the project.

We met regularly throughout the Fall and each meeting led to important and dramatic advancement in the conceptualization of the project. We now have a solid conceptual design for a complete wing incorporating the introduction of innovative curricular changes for general and organic chemistry which, once implemented, will serve Queens College and its students well into the 21st century.

We look forward to working with Paul Welch and his firm in this refurbishment project and recommend him to you without reservation. Indeed, if you are contemplating laboratory construction or redesign, I and my colleagues would submit that you would be well served to work with Paul and his team. Should you have any questions regarding our most positive experience please feel free to contact me by phone or mail.

Very truly yours,
